Observational learning theory by albert bandura made simple pdf

(2013). In M. Retrieved April 29, 2021, from Juffer, F., Bakermans-Kranenburg, M. The theory suggests that how a person behaves is primarily down to context rather than how they process information. While it has some limitations, the SLT successfully explains the acquisition of new behavior in many environments. 10 Key Psychology Concepts SLT foundational concepts While there are several concepts crucial to our understanding of the SLT, the following are foundational (Nabavi, 2012; Introduction, 2020): People learn through observation. Cognitive factors contribute to whether a behavior is acquired. Subsequently, when researchers removed toys, they observed the degree of aggression in the frustrated children. Taking stock: The status of criminological theory (pp. 5). Both factors influence the degree to which an observer exhibits a learned behavior. 28). Criticism and limitations The SLT does not consider the aspect of accountability in actions. T. 74). According to Bandura's SLT, we learn from interacting with others in a social context. The SLT ignores developmental milestones. Verbal instruction model The behavior is explained or described. It depends on viewers' perceptions, including factors such as (Gross, 2020): Are the violent portrayals in realistic settings? This exercise helps clients recognize instances of fixed mindset in their thinking and actions and replace them with thoughts and behaviors more supportive of a growth mindset. The people observed are called models, and the process of learning is described as modeling. Is there a graphic and realistic depiction of the victim's pain and suffering? (2018). W. H. Stages of the Theory: A Diagram Bandura's social learning theory provides a helpful framework for understanding how an individual learns via observation and modeling (Horsburgh & Ippolito, 2018). 17 Positive Psychology Exercises If you're looking for more science-based ways to help others enhance their wellbeing, this signature collection contains 17 validated positive psychology tools for practitioners. Reinforcement and punishment Both reinforcement and punishment are essential factors in the observer's motivation to replicate the behavior they have seen (Nabavi, 2012): Both factors indirectly impact learning (but are not the sole cause). Behavior is learned through observation of the environment. Curling (Eds.), The review of the roots of youth violence (vol. The SLT (later becoming the social cognitive theory) put forward the idea that learning occurs within a social environment, resulting from a shared interaction between person, environment, and behavior (Introduction, 2020). Gross, R. Indeed, "modeling is seen as one of the key factors in the development of prosocial behavior" and occurs in families, workplaces, and education (Davies, 2013, p. Psychological Review, 84(2), 191-215. This article introduces Bandura's social learning theory and explores key concepts, real-life examples, and some fascinating experiments. The Blackwell companion to social work. F. A lecturer who attends and enjoys a training course may imitate and model the instructor's technique and style to improve their teaching methods and student engagement. Driscoll, M. Resources From PositivePsychology.com We have many resources that can help you or your clients learn more effectively as well as overcome challenges during the learning process. Bandura (1977a) agreed with the behaviorist learning theories of classical conditioning and operant conditioning yet, crucially, added the following: Mediating processes take place between the stimuli and response. 489). LaMorte, W. Students reported that learning from role models was "complex and haphazard," and the study recognized that the process of learning from role models was challenging, but could be helped by (Horsburgh & Ippolito, 2018): Ensuring proximity and repeated observation of role models' actions and their behavior Providing insight into the hidden thought processes behind the observable behaviors Being given the opportunity to reproduce and practice behavior accompanied by reflection Fascinating Experiments and Studies The SLT has been studied through several fascinating and memorable studies, including: Bobo doll experiment In 1973, Bandura set out to understand the role of modeling in learning and aggression. (2019, September 9). Akers, R. (2012). These science-based exercises explore fundamental aspects of positive psychology, including strengths, values, and self-compassion, and will give you the tools to enhance the wellbeing of your clients, students, or employees. Wright, & K. American Psychological Association. However, the study concluded that mitigating social factors might have helped, including being part of a small population where everyone knows one another and parents maintaining a high degree of control over their children's behavior. Charlton, T., & Hannan, A. Retention We must be able to remember the observed behavior; this can be increased through rehearsal. 25). P. Violence in news and documentary programs is typically more upsetting. In F. Psychological processing is required to match cognition and behavior between the observation and the performance (Horsburgh & Ippolito, 2018). Bandura identified three basic model types involved in observational learning (Nabavi, 2012): Live model An individual is observed acting out or showing the behavior. Behavioral change models. A Take-Home Message Psychologist Albert Bandura developed the SLT in response to the limitations of behavioral theories of learning. Such development stages typically occur irrespective of the environmental setting. In a 2017 study, parents who received helpful feedback became better role models, child-parent attachment improved, and there was a reduction in behavioral problems in children (Juffer, Bakermans-Kranenburg, & van IJzendoorn, 2017). 37-76). Cognitive processes are central, as learners must make sense of and internalize what they see to reproduce the behavior. The SLT does not account for behavior when there is no role model. When allowed to play with the doll themselves, the children exhibited aggression to a degree that matched the scene they had witnessed. Learning involves modeling, yet does not require behavioral change. Whether applied to education, social work, or criminology, the SLT is a valuable theory that can be used with other ideas and practices to bring about change. Journal of Criminal Justice, 49, 22-31. Reinforcement and punishment have an indirect effect on behavior and learning. Behaviors learned through modeling Bandura proposed that modeling or learning is composed of four mediational processes or conditions that must be met (Horsburgh & Ippolito, 2018; Nabavi, 2012): Attention We must pay attention to the model. To test the hypothesis that imitation played a large part in behavior, he created situations where children between three and five years old watched adults acting aggressively toward a large plastic doll, known as a 'Bobo' doll (Davies, 2013; Gross, 2020). (2020). McMurtry & A. Note that a novice may not be developmentally ready to reproduce the action. (1965). A skill to be worked at: Using social learning theory to explore the process of learning from role models in clinical settings. Research, while ongoing, suggests that "many biological factors influence our learning, and consequently our behavior" (Fox, 2017, p. The SLT can be difficult to test because of ethical issues. Bandura found that the children who had witnessed prior aggressive behavior were more likely to display it themselves. SLT processing The SLT suggests that we learn from one another throughout our lives via the following processes (Nabavi, 2012): Observation We observe other people's behavior. However, Bandura identified that the acquisition of aggressive behaviors did not necessarily mean the child would imitate what they had seen (Gross, 2020). He was elected president of the American Psychological Association in 1974 and awarded the Outstanding Lifetime Contribution to Psychology in 2004 (Nabavi, 2012). The following diagram shows the stages involved in the modeling process (modified from Nabavi, 2012). In a 2018 study using the SLT to explore learning from role models, students confirmed the processes above, describing how they were "selectively and consciously paying attention, using retention strategies, reproducing observed behavior and being motivated to imitate" (Horsburgh & Ippolito, 2018, p. The following diagram represents the three interconnected underlying themes of the SLT: environmental, personal, and behavioral factors (modified from Bandura, 1977b). Two well-known studies researched the introduction of TV into communities where it hadn't previously existed (Williams, 1986; Charlton & Hannan, 2005). R. Strengths of the SLT The SLT is incredibly flexible in explaining a person's various ways of behaving and learning. Negative behavior such as criminal activities can occur without prior exposure to such behavior. Retrieved from 4s. Social Learning Theory. Social Cognitive Learning Theory Williams, T. The SLT states that we acquire behaviors through a combination of reinforcement and imitation, where "imitation is the reproduction of learning through observation" (Gross, 2020, p. M. Social learning theory. Graduating with a degree in psychology, Bandura continued his studies and in 1952 was awarded a PhD in Clinical Psychology from the University of Iowa. As a result, both environmental and cognitive factors combine to influence human learning and behavior. The impact of television: A national experiment in three communities. Bandura, A. 3 Real-Life Examples Criminology and aggression According to the SLT, "aggressive behaviors are learned through reinforcement and the imitation of aggressive models" (Gross, 2020, p. Learning is about interacting with the environment and making a permanent change in knowledge or behavior that improves human performance (Driscoll, 1994). Hodder and Stoughton. (1977b). Psychology of learning for instruction. An improved understanding of such underlying factors, including perception, encoding, and reinforcement, may explain why some individuals are more likely to learn from the antisocial behavior of peers. 15. Self-efficacy: Toward a unifying theory of behavioral change. Academic Press. A 2018 study studied the effect of role modeling in teaching and learning in medical students (Horsburgh & Ippolito, 2018). Social foundations of thought and action. Journal of Personality and Social Psychology, 116(6), 589-595. Retrieved April 29, 2021, from The expectation of reinforcement influences cognitive processes, such as attention and learning. The degree, probability, and frequency of reinforcement impact imitation. Following the arrival of television in St. Helena, a remote island in the South Atlantic Ocean, Charlton and Hannan (2005) found no noticeable difference in the children's behavior. Influence of models' reinforcement contingencies on the acquisition of imitative responses. Economic and Social Research Council. In R. Through a series of experiments, Bandura confirmed the ability of humans to acquire new behavior through observation and imitation. Modeling We are more likely to imitate behavior modeled by people we perceive as similar to ourselves. Bandura's social learning theory & social cognitive learning theory (Unpublished manuscript). Wortley, S. Ontario Ministry of Children, Community and Social Services. Adopt a Growth Mindset A growth mindset is particularly helpful when one is preparing to learn something new. While behaviorists claim learning must result in a permanent behavior change, social learning theorists demonstrated the importance of cognition, recognizing that learning can occur in the absence of behavior (Bandura, 1965). The St. Helena project: Summary of research findings. The SLT explains that learning can happen in various ways, including observation and direct, hands-on experiences. Because of his continuing research, Bandura became known among academics as the father of cognitive theory (Nabavi, 2012). Motivation We must be motivated to demonstrate what we have learned. Prentice Hall. BMC Medical Education, 18, 156. The SLT is particularly valuable in explaining how children learn by imitating family members, friends, and other influential figures and will perform the behavior if the reward is sufficient. The SLT is also valuable in understanding criminal and deviant behavior. Albert Bandura, born in 1925 in Alberta, Canada, became interested in psychology while studying biological sciences at the University of British Columbia (Nabavi, 2012). Autobiography. Symbolic model A real or fictional character displays the behavior online, on TV, in a book, etc. Allyn & Bacon Fox, B. His theory is regarded as the bridge between behaviorist and cognitive learning theories, encompassing attention, memory, and motivational processes (Muro & Jeffrey, 2008) The SLT states that in response to observation, imitation, and modeling, learning can occur even without changing behavior (Bandura, 1965). Retrieved April 29, 2021, from Muro, M., & Jeffrey, P. (2005). Although some historical studies do not meet the ethical research standards of today, the lessons learned remain valuable and insightful for education and behavioral change. IX). Social learning theory in social work The SLT has implications for social work. D. Who is Albert Bandura? Modeling & role models The SLT demonstrates that humans learn and imitate behaviors observed in other people. (1977a). In 1986, the SLT developed into the social cognitive theory, incorporating the idea that learning takes place in a social context, "with a dynamic and reciprocal interaction of the person, environment, and behavior," and a cognitive context that considers past experiences that shape engagement in behavior (LaMorte, 2019). What Is Bandura's Social Learning Theory? While behaviorists focused on how the environment and reinforcement affect behavior, Bandura recognized that people learn by observing how others behave, including the rewards and punishment they receive. A critical review of the theory and application of social learning in participatory natural resource management processes. Learning From My Work This short questionnaire helps adults, teenagers, or children assess their performance and learning orientation when completing homework or other projects. Does the viewer closely identify with the characters? G. Studies involving children observing aggression have shown that it impacts their subsequent behavior in controlled situations. Our attention increases when behavior is more striking, different, or prestigious, and when the model is more similar to ourselves. Nabavi, R. We observe, assimilate, and imitate others' behavior when witnessing positive or rewarding experiences (Nabavi, 2012). Indeed, experiments such as the 'Bobo' doll study would no longer be allowed. L. & Jensen, G. Are aggressive behaviors learned from violence on TV and in films? Introduction of TV "Natural experiments allow the researcher to take advantage of fortuitous and naturally occurring events" (Gross, 2020, p. 491). Use them to help others flourish and thrive. "While learning clearly has social origins among peers and conditioning in society, it is also a biochemical process" (Fox, 2017, p. What is the social learning theory? Imitation Following observation, we assimilate and imitate the observed behavior. Cullen, J. J., & van IJzendoorn, M. Promoting positive parenting Video feedback has been used successfully as a social learning theory intervention to promote positive parenting. Davies, M. 10 Strengths & Weaknesses of the Theory Bandura's SLT has had a profound impact on learning theory and psychology in general. The SLT has been applied in many settings that have consistently shown strong relationships between social learning concepts and behavior. The theory can help social workers better understand how specific behavior has developed and how to intervene, either to act as a role model or to encourage others. Skill learning Learning from role models is a widely accepted learning method, yet in education, the term remains vague and inconsistently used (Horsburgh & Ippolito, 2018, p. Similar modeling occurs when children watch parents read, students see mathematical problems solved, and bystanders witness an act of bravery (Bandura, 1986, 2006). (2006). Introduction to social learning theory in social work. (2020, July). Combining the biological perspective with the SLT Recent research has combined new findings in biological risk factors into mainstream social learning theories of criminal behavior (Fox, 2017). Reflective Questions for Personal Academic Performance This reflection exercise presents a series of prompts inviting students to think about what they are learning, why they are learning, and how they can improve the learning process. Current Opinion in Psychology, 15, 189-194. Blevins (Eds.), Advances in criminological theory. Vol. His approach recognized reinforcement and the importance of observing, modeling, and imitating the emotional reactions, attitudes, and behaviors of others in learning (Bandura, 1977a). Psychology: The science of mind and behaviour. (1986). Wiley Blackwell. Transaction. (1994). Bandura showed that aggressive tendencies, especially in children, are vicariously reinforced by seeing others rewarded for benefiting from their aggressive behavior. In the 1960s, Bandura became known for his social learning theory (SLT). Horsburgh, J., & Ippolito, K. This can be influenced by both reinforcement and punishment. An environmental change can lead to a behavioral one. Lindzey & W. We hope you enjoyed reading this article. As with all psychological theories, there are strengths and weaknesses, and research is continually adding to our knowledge (Introduction, 2020; Wortley, 2008). It's nature and nurture: Integrating biology and genetics into the social learning theory of criminal behavior. Growth Mindset Phrases for Children Likewise, this handout presents examples of different phrases educators can use to encourage children to maintain a growth mindset. 1). The empirical status of social learning theory of crime and deviance: The past, present, and future. Runyan (Eds.), A history of psychology in autobiography (vol. Bandura realized that direct reinforcement alone could not account for all types of learning, so he added a social element to his theory, arguing that people learn by observing others (Nabavi, 2012). Albert Bandura's social learning theory (SLT) suggests that we learn social behavior by observing and imitating the behavior of others. The root causes of youth violence: A review of major theoretical perspectives. A review of existing studies found that the SLT could make sense of events at both a micro and a macro level, considering the temporal and ecological context (Akers & Jensen, 2006). Is the violence justified or rewarded? Contextual and cultural factors can moderate exposure to media violence or aggressive behavior (Gross, 2020). Pairing attachment theory and social learning theory in video-feedback intervention to promote positive parenting. Reproduction We must be capable of replicating the behavior just observed. (2017).
